Furthermore, there are more than 90 independent dealers moving forklift supplies and materials handling equipment. This network enables Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line remarkably includes 63 distinctive products consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these numerous truck versions vary from 3,000 to 33,000 lbs. All trucks are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest rising forklift and lift truck corporation in the North American marketplace, thanks to its outstanding level of product performance and their consistently high level of client support and service given to all Doosan Infracore Forklift clients. The U.S. lift Truck division stationed in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial domestic forklift marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled forklifts as part of a nationwide equipment expansion project. Initial sales of this industrialized equipment focused on large business groups, the armed forces and on state-run companies. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Daewoo started the first home-based forklift business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's superior technological enhancements combined with sales success placed them in a position of substantial expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling industry. This project proved highly profitable for Daewoo and their lift truck product sales expanded greatly. In 1984, the company finished construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a international sales network and started exporting versions they had established through in-house expertise, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
