

Barrel Clamps

Barrel Clamps - Referred to as "Barrel Clamp", this hydraulic accessory is used on lift trucks so as to squeeze objects that you want to transfer using the lift truck. Usually, they're used so as to barrels, handle kegs, and paper rolls, together with some barrel clamp designs having the ability to rotate the cargo. For example, the rotate function allows the one operating the forklift to put in a vertically stored paper inside the horizontal intake of a printing press.
